Web Application Vulnerability Report

Target: https://www.youtube.com

Generated: 2026-08-13 02:14:17

Risk Score	Risk Grade
80 / 100	B

This report was generated for educational purposes as part of a semester project. Only scan systems you own or are authorized to test.

1. HTTP Security Headers

Header	Status	Severity
Content-Security-Policy	Present	-
Strict-Transport-Security	Present	-
X-Frame-Options	Present	-
X-Content-Type-Options	Present	-
Permissions-Policy	Present	-
Referrer-Policy	Missing	LOW

2. SSL/TLS Certificate

Protocol	TLSv1.3
Issuer	Google Trust Services
Expires	2026-09-21 (39 days left)

3. Open Ports

Port	Service	Note
21	FTP	Often unencrypted; credentials can be sniffed.
80	HTTP	Expected for web apps; check if HTTPS redirect exists.
443	HTTPS	Expected for secure web apps.

4. Exposed Sensitive Paths

Path	Severity	Description
/robots.txt	LOW	Can reveal hidden paths the site wants unindexed.
/.well-known/security.txt	INFO	Not a risk — good practice if present.

5. Score Breakdown

• Missing header 'Referrer-Policy' (-3, low)

• Risky port open: 21 (FTP) (-10, high)

• Port open: 80 (HTTP) (-2, info)

• Port open: 443 (HTTPS) (-2, info)

• Exposed path '/robots.txt' (-3, low)
